

**Name:** Assign Employees To Shift.

**Textual Description:** This use case describes the process of assigning employees to a work shift according to their roles, availability, and shift requirements

**List of Actors:** HR Manager

**Pre-Conditions:**

The employee exists in the system.

The shift exists in the system.

The employee is active.

The employee has the required role for the shift.

The employee is available during the selected shift

**Post-Conditions:**

The employee is assigned to the selected shift.

The shift assignment is stored in the system.

The number of assigned employees for the role is updated.

**Main Success Scenario:**

- The HR Manager selects the option to assign employees to a shift.
- The system displays the available shifts.
- The HR Manager selects a shift.
- The system displays the required employee roles for the selected shift.
- The HR Manager selects an employee and a role.
- The system verifies that:
  - the employee is active,
  - the employee has the required role,
  - the employee is available during the shift,
  - the employee is not already assigned to the shift.
- The system assigns the employee to the shift.
- The system updates the shift assignment information.
- The system displays a confirmation message

**Alternatives / Extensions:**

**Employee does not have the required role | Employee is unavailable during the shift | Employee is already assigned to the shift :**

- The system displays an error message.
- The HR Manager selects another employee.

**Shift does not exist:**

- The system displays an error message.

The use case ends.
